1. Test Results Overview

Code provided at the github.

Test Case 1(Login and Authentication): testRegister and testLogin methods checked the acceptence of the login and authentication. Tests passed. No issues encountered.

Test Case 2(Medication Reminder Functionality): Tested manually. We assigned a day and tested it. No issues encountered. Test Passed.

Test Case 3(Fitness Goal Tracking): Fitness related tests tested with selenium. Results is at the Picture. It passed. Encountered a button related issue. Solved it.

Test Case 4(Water Consumption Tracker): Backend developers implemented a alert system for tracking water. It interrupted some of the tests. We extracted alerts from the Project to solve the issue.

2. Test Results Analysis

Our Selenium test results showed us;

1- All the buttons at the project are working.
2- It succesfully connects with the database.
3- Authentications are well checked.
4- The local site performs fast enough. Selenium helped us track the speed.

Bugs and problems we encountered
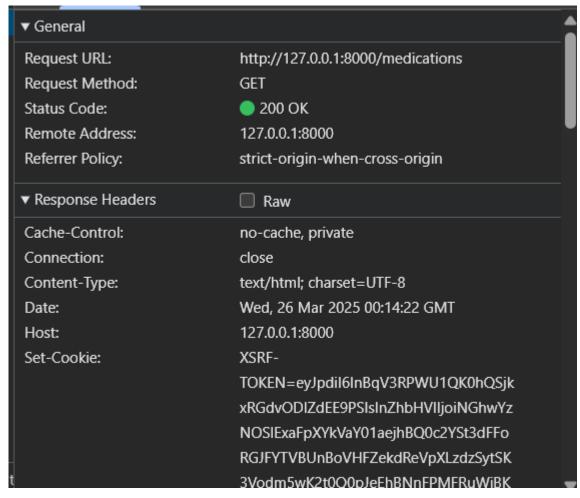

1- Frontend couldnt track user spesific ids even though it was connected with the database.

2- We couldnt merge frontend and backend efficiently.
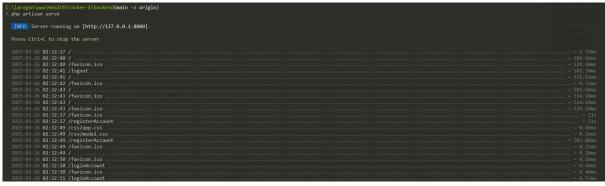

With enough time these problems would be solved.

3. Logs and Outputs

▼ General

Request URL:	http://127.0.0.1:8000/appointment
Request Method:	GET
Status Code:	🟢 200 OK
